Hi Everyone,

Well, it's Spring, at least according to the calendar. Hopefully the one 90-degree day among all the cold days wasn't Mother Nature's idea of enough. School will be out soon and we should be enjoying summer.

As always, it's a great time to review your goals, plans, and portfolio. Please don't hesitate to call if I can help with any questions you might have on your financial situation or changes that have taken place. Thank you!

Steve

15 Facts about Social Security

Saving for the Future: Start Now or Start Later?

Saving through Your Retirement Plan at Work? Don't Let These Five Risks Derail Your Progress

How do I figure the tax on the sale of my home?

15 Facts about Social Security

It's easy to take Social Security for granted when retirement is years away, but with 94% of the U.S. workforce covered by Social Security,* it's likely that this program will play a role in your financial future, perhaps even sooner than you think. Here are some facts and statistics from the Social

Security Administration that highlight why Social Security is important to so many people.

Retirement benefits

The Social Security program began in 1935 as a way to protect individuals against economic hardship. Over the years, Social Security has grown to include several other types of benefits, but Social Security is still synonymous with retirement.

Did you know that ...

- Approximately 70% of Social Security benefits are paid to retirees and their dependents**
- 73% of workers elect to receive reduced benefits early, before their full retirement age*
- The average monthly retirement benefit is \$1,262**
- The maximum monthly retirement benefit payable in 2014 is \$2,642 for someone retiring at full retirement age***

Survivors benefits

Upon your death, your surviving spouse, ex-spouse, children, or dependent parents may be eligible to receive benefits based on your earnings record. These benefits can be a valuable source of income when your family needs it the most.

Did you know that ...

- Survivors of deceased workers account for about 11% of Social Security benefits paid**
- About 96% of persons aged 20 to 49 have survivors protection for their children under 18 and for their surviving spouse who cares for those children****

- The average monthly family benefit is approximately \$2,561 for a widowed mother or father and two children*

Disability benefits

Disability benefits from Social Security can help protect you and family members that rely on you for financial support in the event that due to sickness or injury you're unable to work and earn a living.

Did you know that ...

- Disabled workers and their dependents account for 19% of Social Security benefits paid**
- Approximately 90% of workers age 21 to 64 and their families are protected against long-term disability***
- The average age of a worker receiving disability benefits is 53.2**
- The average monthly benefit for a disabled worker is \$1,130**

Other facts

Here are some other facts about Social Security that you may not know:

- 55% of adult Social Security beneficiaries are women**
- More than 3.4 million children under age 18 and students age 18 to 19 receive Social Security benefits**
- Social Security provides at least half of total retirement income for 74% of nonmarried beneficiaries age 65 or older**

Saving for the Future: Start Now or Start Later?

No matter how you save to reach a future goal, there is an advantage to putting your savings and earnings to work for you as early as possible.

All examples are hypothetical and are not guaranteed. Fees and taxes are not shown and could reduce the amount available.

**All investment involves risk, including the possible loss of principal.*

There are many ways to try to reach a future goal. You can save now, or you can save later (or perhaps do both). But there is an advantage to putting your savings and earnings to work for you as early as possible.

Compound earnings

If you save \$1,000 now and invest it at an assumed 6% annual rate of return, in 1 year you would have \$1,060, in 2 years about \$1,124, and in 10 years about \$1,791. Your earnings compound as you earn returns on your earnings. Your \$1,000 initial investment increases through compounding to \$1,791.*

Compounding at work

For example, let's say you start saving now. You save \$5,000 at the beginning of each year in years 1 to 20 and put it into an investment that earns a hypothetical 6% annually. At the end of 30 years, you will have accumulated about \$349,150.

Alternatively, let's say you start 10 years later. You save \$5,000 at the beginning of each year in years 11 to 30. Once again, you earn an assumed 6% annually on that money. At the end of 30 years, you will have accumulated about \$183,928.

In each of these examples, you've put aside a total of \$100,000. However, by starting now, you accumulate about \$165,222 more than if you start later, and all of that is from earnings. By starting now, rather than putting it off, you have put your money and the power of compound earnings to work for you.

Years	Start Now	Start Later
1 - 10	\$5,000	
11 - 20	\$5,000	\$5,000
21 - 30		\$5,000
Saved	\$100,000	\$100,000
Earnings	\$249,150	\$89,928
Total	\$349,150	\$183,928

Now, let's look at a different situation. Let's say you would like to start later but accumulate the same amount as if you had started putting money aside now. In this case, you would need to save more, about \$8,954 at the beginning of each year in years 11 to 30, in order to accumulate \$349,150 after 30 years.

In this example, you would need to save a total of about \$179,085. That's \$79,085 more than if you had started earlier, when compounding could have helped make up that difference. Compound earnings don't have as much time to

work for you when you postpone getting started.

Years	Start Now	Start Later
1 - 10	\$5,000	
11 - 20	\$5,000	\$8,954
21 - 30		\$8,954
Saved	\$100,000	\$179,085
Earnings	\$249,150	\$170,065
Total	\$349,150	\$349,150

Strike a balance

Of course, you could accumulate even more if you do both. For example, if you set aside and invest \$5,000 at the beginning of each year in years 1 to 30 and earn an assumed 6% annually on that money, at the end of 30 years, you will have accumulated about \$419,008. This is substantially greater than the \$183,928 accumulated if you invest \$5,000 in years 11 to 30, while somewhat greater than the \$349,150 accumulated if you invest \$5,000 in years 1 to 20.

But maybe you can't afford to set aside \$5,000 now. Could you manage \$3,000 this year, increase that amount for next year by 3% to \$3,090, and continue to increase the amount set aside by 3% each year? If that money earns an assumed 6% annually, you will have accumulated about \$351,520 at the end of 30 years, slightly more than the \$349,150 accumulated if you save \$5,000 each year in years 1 to 20.

Compared to saving \$5,000 a year for 30 years, you've contributed almost as much here (\$142,726 compared to \$150,000), but your earnings are substantially less (\$208,794 compared to \$269,008) because your largest contributions came in later years and had less time to work for you.

Year	Constant	Increasing
1	\$5,000	\$3,000
2	\$5,000	\$3,090
...		
29	\$5,000	\$6,864
30	\$5,000	\$7,070
Saved	\$150,000	\$142,726
Earnings	\$269,008	\$208,794
Total	\$419,008	\$351,520

Saving through Your Retirement Plan at Work? Don't Let These Five Risks Derail Your Progress

Keep in mind that no investment strategy can guarantee success. All investing involves risk, including the possible loss of your contribution dollars.

As a participant in your work-sponsored retirement savings plan, you've made a very important commitment to yourself and your family: to prepare for your future. Congratulations! Making that commitment is an important first step in your pursuit of a successful retirement. Now it's important to stay focused--and be aware of a few key risks that could derail your progress along the way.

1. Beginning with no end in mind

Setting out on a new journey without knowing your destination can be a welcome adventure, but when planning for retirement, it's generally best to know where you're going. According to the Employee Benefit Research Institute (EBRI), an independent research organization, workers who have calculated a savings goal tend to be more confident in their retirement prospects than those who have not. Unfortunately, EBRI also found that less than half of workers surveyed had actually crunched the numbers to determine their need (Source: 2013 Retirement Confidence Survey, March 2013).

Your savings goal will depend on a number of factors--your desired lifestyle, preretirement income, health, Social Security benefits, any traditional pension benefits you or your spouse may be entitled to, and others. By examining your personal situation both now and in the future, you can determine how much you may need to accumulate to provide the income you'll need during retirement.

Luckily, you don't have to do it alone. Your employer-sponsored plan likely offers tools to help you set a savings goal. In addition, a financial professional can help you further refine your target, breaking it down to answer the all-important question, "How much should I contribute each pay period?"

2. Investing too conservatively...

Another key to determining how much you may need to save on a regular basis is targeting an appropriate rate of return, or how much your contribution dollars may earn on an ongoing basis. Afraid of losing money, some retirement investors choose only the most conservative investments, hoping to preserve their hard-earned assets. However, investing too conservatively can be risky, too. If your contribution dollars do not earn enough, you may end up with a far different retirement lifestyle than you had originally planned.

3. ...Or aggressively

On the other hand, retirement investors striving for the highest possible returns might select investments that are too risky for their overall

situation. Although it's a generally accepted principle to invest at least some of your money in more aggressive investments to pursue your goals and help protect against inflation, the amount you invest should be based on a number of factors.

The best investments for your retirement savings mix are those that take into consideration your total savings goal, your time horizon (or how much time you have until retirement), and your ability to withstand changes in your account's value. Again, your employer's plan likely offers tools to help you choose wisely. And a financial professional can also provide an objective, third-party view.

4. Giving in to temptation

Many retirement savings plans permit plan participants to borrow from their own accounts. If you need a sizable amount of cash quickly, this option may sound appealing at first; after all, you're typically borrowing from yourself and paying yourself back, usually with interest. However, consider these points:

- Any dollars you borrow will no longer be working for your future
- The amount of interest you'll be required to pay yourself could potentially be less than what you might earn should you leave the money untouched
- If you leave your job for whatever reason, any unpaid balance may be treated as a taxable distribution

For these reasons, it's best to carefully consider all of your options before choosing to borrow from your retirement savings plan.

5. Cashing out too soon

If you leave your current job or retire, you will need to make a decision about your retirement savings plan money. You may have several options, including leaving the money where it is, rolling it over into another employer-sponsored plan or an individual retirement account, or taking a cash distribution. Although receiving a potential windfall may sound appealing, you may want to think carefully before taking the cash. In addition to the fact that your retirement money will no longer be working for you, you will have to pay taxes on any pretax contributions, vested employer contributions, and earnings on both. And if you're under age 55, you will be subject to a 10% penalty tax as well. When it's all added up, the amount left in your pocket after Uncle Sam claims his share could be a lot less than you expected.

How do I figure the tax on the sale of my home?

In general, when you sell your home any amount you receive over your cost basis (what you paid for the home, plus capital improvements, plus the costs of selling the home) is subject to capital gains taxes. However, if you owned and used the home as your principal residence for a total of two out of the five years before the sale (the two years do not have to be consecutive), you may be able to exclude from federal income tax up to \$250,000 (up to \$500,000 if you're married and file a joint return) of the capital gain when you sell your home. You can use this exclusion only once every two years, and the exclusion does not apply to vacation homes and pure investment properties.

For example, Mr. and Mrs. Jones bought a home 20 years ago for \$80,000. They've used it as their principal home ever since. This year, they sell the house for \$765,000, realizing a capital gain of \$613,000 (\$765,000 selling price minus a \$42,000 broker's fee, minus the original \$80,000 purchase price, minus \$30,000 worth of capital improvements they've made over the years). The Joneses, who file jointly, and are in the 28% marginal tax bracket, can

exclude \$500,000 of capital gain realized on the sale of their home. Thus, their tax on the sale is only \$16,950 (\$613,000 gain minus the \$500,000 exemption multiplied by the 15% long-term capital gains tax rate).

What if you don't meet the two-out-of-five-years requirement? Or you used the capital gain exclusion within the past two years for a different principal residence? You may still qualify for a partial exemption, assuming that your home sale was due to a change in place of employment, health reasons, or certain other unforeseen circumstances.

Special rules may apply in the following cases:

- You sell vacant land adjacent to your residence
- Your residence is owned by a trust
- Your residence contained a home office or was otherwise used for business purposes
- You rented part of your residence to tenants
- You owned your residence jointly with an unmarried taxpayer
- You sell your residence within two years of your spouse's death
- You're a member of the uniformed services
